

## Electronic Pingpong Design Information

### Printed Circuit Board Layouts

The Pingpong printed circuit board (pcb) layout was done using Smartwork, <http://www.wintek.com/smartworkinfo.html>. It is a very simple single-sided board.

The layout is supplied here as a jpeg scan, viewed from the component side. It can be printed out on translucent film, scaled appropriately, in order to make pcbs.

The parts list can be extracted from the circuit diagram of Appendix 2.
